

Technology Rotation Leasing

Lower your technology costs, increase your profits, and add flexibility!

CapX Funding offers a unique program, designed for businesses that need to keep the latest technology in front of their people and, as a result, need true technology rotation capability every two or three years.

We can provide your company with a customized solution that makes sense!

Here's why you need Technology Rotation Leasing:

- Usually a 24 to 36 month lease term, often tied to the manufacturer's warranty period
- Competitive lease rentals, reflective of the equipment's projected residual value and your negotiated purchase price
- Transfer the technology obsolescence risk to the Lessor
- End of lease flexibility; Lessee may elect any of the following options:
 1. Return some or all of the equipment (not "all or none")
 2. Continue to rent for an agreed upon fixed period
 3. Purchase the equipment for its Fair Market Value
- The lease payments are expensed for tax purposes and often for accounting purposes as well (as an Operating Lease)
- The Lessee only pays for the use of the equipment, providing the lowest possible cost for the technology
- This program truly offers end users a leasing solution that meets both their technology and financial needs.
